

Sahil Vishwakarma

Software Developer | ReactJS | .NET | REST APIs

6260737282 | sahilvishwakarma6260@gmail.com | LinkedIn

Professional Summary

Full Stack Developer with 3.5+ years of experience building scalable SaaS platforms using React.js (TypeScript) and .NET. Specialized in multi-tenant architecture, event-driven systems, and high-performance REST APIs. Proven track record of improving system performance and delivering production-grade solutions in Agile environments.

Technical Skills

- **Languages & Frameworks:** ReactJS, TypeScript, JavaScript, C#, .NET Core, ASP.NET Core, Entity Framework Core (EF Core), LINQ
- **Frontend Development:** Reusable Component Design, State Management, Responsive UI Design, Bootstrap
- **Backend & API Development:** RESTful API Design, API Versioning, Dependency Injection, Middleware, Global Exception Handling, JWT Authentication, Async/Await, Swagger/OpenAPI, SOLID Principles
- **Testing & Debugging:** Unit Testing (xUnit/NUnit), API Testing, Postman, Debugging
- **Data & Performance:** SQL Server, Query Optimization, Indexing Strategies
- **Tools & Practices:** Git, JIRA, Agile Methodology, CI/CD (Azure DevOps / GitHub Actions)

Professional Experience

Software Developer at Aloha Technology Pvt. Ltd., Pune, India

Sep 2022– Present

- Architected scalable and reusable frontend components using ReactJS and TypeScript for enterprise applications.
- Integrated Web APIs with frontend applications to ensure seamless data flow and elevate user experience.
- Partnered with cross-functional teams to translate business requirements into production-ready solutions.
- Applied clean architecture principles to enhance modularity, scalability, and long-term maintainability.
- Delivered 30+ RESTful APIs, improving system response time by ~25%
- Optimized SQL queries, reducing API latency and improving performance under load

Key Projects

Multi-Tenant SaaS Platform (ARM + Core Infrastructure)

- Developed a multi-tenant SaaS platform enabling scalable Accounts Receivable workflows with strict tenant-level data isolation.
- Built and maintained modular backend APIs supporting workflows, tasks, templates, ERP data, and user management.
- Architected an event-driven workflow engine to evaluate triggers and orchestrate actions with controlled execution logic.
- Implemented an asynchronous email processing system with template rendering and approval gating.
- Designed tenant-scoped data models ensuring secure access patterns and efficient querying.
- Developed React + TypeScript frontend for workflow builder, template editor, and task management.

- Applied SOLID principles, dependency injection, and layered architecture for maintainability and scalability.
- Wrote and executed unit test cases for backend business logic to improve code reliability and maintainability.
- Leveraged agentic IDE workflows using MCP-based context files (MD) with tools like Kiro (Amazon) to enhance code generation, maintain architectural consistency, and accelerate development across repositories.

Field Service Suite (FSS)

- Dynamic React dashboards built for scheduling, task assignment, and reporting workflows.
- Engineered backend APIs that enable real-time data synchronization between distributed field teams.
- Reinforced application security by integrating authentication mechanisms and improving overall reliability.
- Collaborating with cross-functional teams (QA, product, DevOps) during releases and hotfix cycles.
- Performing root cause analysis for timeout issues, data inconsistencies, and workflow defects.

Payables Approval & Tracking (PAT)

- Modernized backend services and user-interface workflows for financial processing systems.
- Streamlined database queries and business workflows, minimizing manual processing effort.
- Elevated system usability by aligning frontend enhancements with backend API integrations.
- Writing and optimizing SQL Server stored procedures, queries, and database logic to improve performance and reliability.
- Investigating and resolving production issues across the full stack, including UI, APIs, and database layers.

Key Achievements

- Settled critical workflow defects impacting scheduling processes.
- Identified edge cases in UI and backend integrations to prevent data issues.
- Performed environment comparisons to troubleshoot release-specific problems.
- Improved application responsiveness through database and API optimizations.

Education

- Bachelor of Technology, Information Technology
Gyan Ganga Institute of Technology and Sciences, RGPV University,
July 2019– June 2023

Professional Strengths

- Strong debugging and problem-solving skills in complex systems
- Ability to work effectively with legacy codebases and drive incremental improvements
- Focus on code quality, maintainability, and production stability
- Clear communication during technical discussions and reviews

Additional Information

- Comfortable working with legacy codebases while modernizing logic incrementally
- Strong focus on code correctness, maintainability, and system reliability
- Effective communicator in technical discussions, PR reviews, and issue analysis
