PROFESSIONAL SUMMARY

Full Stack Developer with 3.5+ years of experience building scalable SaaS platforms using React.js (TypeScript) and .NET on Azure Cloud. Specialized in multi-tenant architecture, event-driven systems, and cloud-hosted REST APIs. Proven track record of improving system performance and delivering production-grade solutions in Agile environments.

TECHNICAL SKILLS

Languages	ReactJS, TypeScript, JavaScript, C#, .NET Core, ASP.NET Core, EF Core, LINQ
Frontend	Reusable Component Design, State Management, Responsive UI Design, Bootstrap
Backend & APIs	RESTful API Design, API Versioning, Dependency Injection, Middleware, JWT Auth, Swagger/OpenAPI, SOLID Principles
Testing	Unit Testing (xUnit/NUnit), Integration Testing, API Testing, Postman, Debugging
Data	SQL Server, Query Optimization, Indexing Strategies, Stored Procedures
Tools	Git, JIRA, Agile Methodology, CI/CD (Azure DevOps / GitHub Actions)
Cloud	Azure App Service, Azure SQL, Azure Blob Storage, Azure Key Vault, Azure Application Insights, Azure Pipelines

PROFESSIONAL EXPERIENCE

Software Developer | Aloha Technology Pvt. Ltd.

Sep 2022 – Present

Pune, India

- ▶ Architected scalable and reusable frontend components using ReactJS and TypeScript for enterprise applications.
- ▶ Delivered 30+ RESTful APIs hosted on Azure App Service, improving system response time by ~25%; monitored performance via Azure Application Insights.
- ▶ Integrated Web APIs with frontend applications to ensure seamless data flow and enhanced user experience.
- ▶ Applied clean architecture principles (SOLID) to enhance modularity, scalability, and long-term maintainability.
- ▶ Participated in sprint planning, daily standups, and retrospectives following Agile/Scrum methodology.
- ▶ Partnered with cross-functional teams to translate business requirements into production-ready solutions.

KEY PROJECTS

Multi-Tenant SaaS Platform (ARM + Core Infrastructure)

- ▶ Developed a multi-tenant SaaS platform enabling scalable Accounts Receivable workflows with strict tenant-level data isolation.
- ▶ Architected an event-driven workflow engine to evaluate triggers and orchestrate actions with controlled execution logic.

- ▶ Built and maintained modular backend APIs supporting workflows, tasks, templates, ERP data, and user management.
- ▶ Implemented asynchronous email processing system with template rendering and approval gating.
- ▶ Designed tenant-scoped data models ensuring secure access patterns and efficient querying.
- ▶ Developed React + TypeScript frontend for workflow builder, template editor, and task management modules.
- ▶ Applied SOLID principles, dependency injection, and layered architecture for maintainability and scalability.
- ▶ Stored email templates and attachments in Azure Blob Storage; managed secrets and connection strings via Azure Key Vault.
- ▶ Wrote and executed xUnit test cases covering business logic, edge cases, and API contract validation.
- ▶ Deployed backend services to Azure App Service with CI/CD pipelines via Azure DevOps, ensuring reliable and automated releases.

Field Service Suite (FSS)

- ▶ Built dynamic React dashboards for scheduling, task assignment, and reporting workflows.
- ▶ Engineered backend APIs enabling real-time data synchronization between distributed field teams.
- ▶ Reinforced application security by integrating JWT-based authentication mechanisms and improving overall reliability.
- ▶ Collaborated with QA team to define test cases, reproduce bugs, and validate fixes before production releases.
- ▶ Tracked API errors and response times using Azure Application Insights to proactively identify and resolve production issues.

Payables Approval & Tracking (PAT)

- ▶ Modernized backend services and UI workflows for financial processing systems, reducing manual effort significantly.
- ▶ Streamlined approval chains by re-engineering database queries and business logic for speed and accuracy.
- ▶ Wrote and optimized SQL Server stored procedures, queries, and database logic for improved performance.
- ▶ Validated financial workflows end-to-end through integration testing to ensure data accuracy and reliability.
- ▶ Investigated and resolved production issues across the full stack — UI, APIs, and database layers.

KEY ACHIEVEMENTS

- ▶ Resolved critical workflow defects impacting scheduling processes, restoring system stability under tight deadlines.
- ▶ Identified edge cases in UI and backend integrations to prevent data loss across tenant environments.
- ▶ Performed environment comparisons to troubleshoot and isolate release-specific regression issues.
- ▶ Improved application responsiveness through targeted database indexing and API-level caching strategies.

EDUCATION

B.Tech – Information Technology

Jul 2019 – Jun 2023

Gyan Ganga Institute of Technology and Sciences, RGPV University

PROFESSIONAL STRENGTHS

- ▶ Strong debugging and problem-solving skills in complex distributed systems.
- ▶ Comfortable working with legacy codebases while modernizing logic incrementally.
- ▶ Strong focus on code correctness, maintainability, and production stability.
- ▶ Effective communicator in technical discussions, PR reviews, and issue analysis.
